The Ounce Ounce Ounce System back to script version

Hey guys Daniel Youtube Channel here. Today we're back with another BANGER of a video, and in this one we're going to learn that things can be good without a purpose.

One example is a thing that I made about a month ago for Daniel Youtube Channel . It's a video about the "ounce ounce ounce" system. A system that can derive every unit that SI/CGS/FFF/Seven C's can. Its base units are the ounce (unit of weight), the ounce (unit of force), and the ounce (unit of length).

This system isn't very useful,

its base unit if time is about zero point one five seconds, mass is about eight million grams (not as big as it sounds that's only seven cars worth of mass), length is about zero point zero four centimeters, energy is zero point zero zero zero one Joules power is about zero point zero zero zero eight watts electric charge is about eight million coulomb electric current is about sixty one million amps that's about two

thousand lightning bolts or about fifty eight thousand car batteries, conductance is about four sextillion mho for reference the most conductive thing known (silver) has about sixty three millions mho after one meter or about one hundred fifty four billion mho after one ounce so silver would be about one thirty millionth of our unit of conductance, and finally temperature is about two *sextillion* kelvin or about three hundred forty eight quintillion times the temperature of the sun or about

three hundred sixty six *billion* times the highest temperature ever recorded which was at the large hadron collider.

Now we do think temperatures were higher at the beginning of the universe by a factor of fifty million but we weren't there (obviously) so we can’t know for sure.

Now there really isn’t a reason to use it, so why did I make it? It was fun! I had fun researching equations for coulombs or candela and seeing what monstrosity of a unit comes out. Things don’t need a point. I see so many people say “why do that, what's the point”.

There doesn’t need to be a point, so if you're doing something artistic maybe don’t try to give it a point. Things can still be good without one.

I would like to thank the nine people (not joking) who watched the “ounce ounce ounce” system video and you all for listening. Anyway guys, that's the end of another BANGER of a videospeech. Make sure to hit those like and subscribe buttons, turn on notifications by ringing that bell, comment, share, watch till the end, and do everything every Youtube tells you to do at the end of all of their videos. Bye!
